

Release Notes

No	Module / Function	Version	Type of adjustment	Release Notes
790	Business Process Engine	v2026.1	Fix	An issue with reloading when a new version of a document is uploaded in a process execution has been fixed.
783	Content Documents	v2026.1	Fix	An issue where the view and edit modes could be mixed up in content documents has been fixed.
4257	Documents	v2026.1	Fix	An issue where the "Usage listing" button was missing in process documents has been fixed.
3978	Documents	v2026.1	Fix	It has been ensured that preset [Model].[ContainedOfModel] works regardless of where the document is created.
3415	Modeler	v2026.1	Improvement	The sidebar in the process modeler displays the contents of the fields in the selected language without fallback. This means that untranslated fields are displayed as empty.
4340	Modeler	v2026.1	Fix	An issue where clicking on the pen in process modeler didn't work when using Edge/Chrome browser has been fixed.
4223	Object Management	v2026.1	Fix	An issue where the tree search function in the Object Management tree couldn't find documents has been fixed.
3030	Performance	v2026.1	Modification	The setting "Prevent doc property refresh on new version" defines whether or not the doc properties are refreshed for a new version. This setting is for performance reasons and only prevents the document properties from being updated during the reversioning. As soon as the physical document is opened for the first time, the document properties are updated.
3623	Process	v2026.1	Fix	An issue where no standard processes were found when searching in the personal process map cube has been fixed.
4036	Process	v2026.1	Improvement	Reordering tasks in activity lists is now displayed in the version comparison.
4225	Reporting	v2026.1	Fix	An issue with missing entries in the process execution evaluation has been fixed.

4232	Reporting	v2026.1	Fix	An issue where organisational units were missing in the selection for risk analytics if the parent unit did not have a portfolio has been fixed.
4177	WebDAV	v2026.1	Improvement	It has been ensured that Microsoft Office once again observes the timeout period set by IMS to determine validity when editing a WebDAV document.
3414	Workflow	v2026.1	Improvement	The workflow export/import function has been enhanced and now also includes advanced calculation configurations in workflows and generic data containers.
4299	Workflow	v2026.1	Improvement	The setting 'Sending emails from workflows sequentially and ignore invalid ones has been introduced. With this setting, information e-mails from workflows are sent to individual recipients one after the other, instead of all recipients in a single e-mail. If a recipient has an invalid e-mail address, the workflow is not stopped and sending continues with the next user. The workflow is only stopped if the system is unable to send a single e-mail. The invalid recipient is logged in the log file and in the log viewer. This setting must be activated by IMS.
