

Release Notes

No	Module / Function	Version	Type of adjustment	Release Notes
4947	Assessments	v2026.4	Fix	Sub-criteria in the Assessment module can now be created and edited when the content language is neither German nor English.
4644	Basic	v2026.4	Feature	Objects (process maps, processes, documents, document groups, object management objects, process executions, organizational units) can now be marked as favorites directly via the star icon on the object. Objects marked as favorites are automatically displayed in the "Favorites" cube on the home page. This marking is user-specific and does not affect other users.
4781	Basic	v2026.4	Improvement	Two enhancements have been implemented: 1) "Risk Owner" filter by organizational unit: The "Risk Owner" filter in the portfolio now also supports selecting an organizational unit; all users assigned to that organizational unit are automatically included. Note: Previously, only organizational units that matched exactly were resolved, and their users were not included. The filtering is now more comprehensive. 2) Search by e-mail address in Organization: A configuration option has been added to enable searching by e-mail address in the "Organization" section of the advanced search.
4904	Cubes	v2026.4	Fix	An issue where document checks were not shown in the check cube for users whose owner or editor role was granted only on a document group instead of globally has been fixed.
1158	Design and UX	v2026.4	Improvement	It has been ensured that the mouse pointer changes only when a column on the Analytics results page is clickable.
4906	Documents	v2026.4	Fix	An issue where the valid-to-date of a document could not be set or changed when the document is in a process document group has been fixed.
4796	Documents	v2026.4	Feature	Word templates now support text placeholders ({{Property name}}) for DocProperties, including automatic conversion of HTML-formatted values into native Word formatting (bold, italic, lists, tables). With an add-on, you can also use bookmarks.
4885	Dynamic Forms	v2026.4	Fix	An issue where metadata columns from dynamic forms (e.g., date fields) appeared empty in the document group overview has been fixed. The configured values are now displayed correctly in the overview columns.
845	Dynamic Forms	v2026.4	Improvement	Deleting a dynamic form field is now blocked when the field is still in use in a rule or a role. Users will see where the field is referenced and must remove that usage before deletion.
4722	Modeler	v2026.4	Improvement	Highlighting context-specific phases in Modeler now works with a wider range of SVG icons.
4801	Modeler	v2026.4	Improvement	When the standard process flag is set, the topology field in the Modeler now automatically defaults to "Manual" instead of showing an empty selection.
4724	PDF Creation	v2026.4	Fix	An issue with generating a process map PDF has been fixed.
4891	Permissions	v2026.4	Fix	An issue where a Superuser could be denied authorization to change a process topology when

				they held viewer authorization on a workflow step has been fixed.
4909	Process	v2026.4	Fix	An issue where the PDF of a process showed connections that were in a different map context has been fixed.
4645	Reporting	v2026.4	Feature	A manual "Load" button has been added to various Analytics pages for processing times and people involved. This makes search results load noticeably faster, especially for extensive result lists. You can switch back to the previous behavior via the setting "Automatically load the lead times in Analytics".
2003	Reporting	v2026.4		Excel exports from Analytics evaluations now include a direct link to the corresponding IMS object (process, document, process execution, object management). Users can navigate directly from an exported Excel row to the related object in IMS.
4857	Risk	v2026.4	Improvement	It has been ensured that a risk can be assessed when " is used in the name.
4864	Standards and Law Management	v2026.4	Fix	An issue that caused an error message when translating the section names in the Standards and Laws Management module has been fixed.
892	Workflow	v2026.4	Feature	During the configuration of a workflow, the wizard now checks for common misconfigurations (e.g., missing "Finalize" step, missing role assignment on exclusive-access steps, incomplete Add-on or notification setup) and shows an immediate error. The workflow cannot be finalized until the issue is corrected.
4726	Workflow	v2026.4	Fix	An issue with the ClearSubObjects add-on action has been fixed.
